NATURAL, SUSTAINABLE AND ECO-FRIENDLY PROMOTIONAL GIFTS

The GO GREEN collection helps you achieve your promotional goals in a more sustainable way. The products in this catalogue provide greener alternatives to traditional items. They are fully or partially made of natural, sustainable or recycled materials or provide a substitute to a normally disposable everyday item.

How can these changes help our environment?

MATERIALS

One way to reduce waste – especially plastic waste – is to choose products that are made of materials that are or can be recycled. Recycling has several benefits, in addition to reducing the amount of waste going to landfills. It uses waste materials to convert them into new products, which reduces the use of fresh raw materials. Recycling materials needs the fraction of the energy than the original production, which also reduces air and water pollution.

Another option is to use natural materials that are biodegradable i.e. they are capable of decomposing back into natural elements. It means that these products can be safely disposed when they are no longer functional.

REUSABLE PRODUCTS

We encourage our customers to replace everyday disposable items with reusable alternatives and enjoy their advantages. Not only do they help to reduce the amount of waste, but they are safer as well. Storing your drinks in glass containers can help to preserve them longer. Cotton shopping bags are washable, so you don't have to worry when you buy your vegetables and fruits in bulk. These products also look much more attractive and elegant, ensuring that your message makes the best impact.

BAMBOO

Bamboo is an evergreen plant from the grass family that has more than 1400 species. Most of them are native to warm and moist tropical climates, however, many species are also found in diverse regions. Bamboo is the fastest growing plant; certain species have been recorded to grow 910 mm within one day. Although a more typical growth rate for commonly cultivated bamboos is 30-100 mm per day during the growing period. They are harvested from two to three years through five to seven years, depending on the species. Bamboo is also very prolific; it produces new culms each Spring from its continuously growing root system regardless of the harvesting of mature stems.

Bamboo is a very flexible and strong material; therefore it is also used as a construction material. It is naturally antibacterial, which makes it a convenient material to use in the production of toothbrushes, combs and other bathroom accessories. Fabric made of bamboo fibre is also used for clothes and diapers.

CORK

Cork is the bark of the cork oak tree; it is a completely natural raw material. It is a sustainable and renewable resource because the cork tree is not cut down, only the bark is stripped to harvest the cork, after which the tree immediately begins to grow new bark. Once the cork oak tree is about 25 years old the cork can be stripped from the trunk every nine years. The trees live for about 200-300 years. Furthermore, it is completely biodegradable and recyclable.

Cork is lightweight, impermeable to liquids and gases, elastic and compressible, provides thermal and acoustic insulation. Because of these characteristics, it is used in a variety of products. When the harvested bark is of high quality it is known as "gentle" cork, and it is used to make stoppers for wine and champagne bottles. However, the first harvest called "virgin" cork usually produces lower quality material. These sheets of cork – along with the used stoppers that are collected – are ground up and manufactured into new cork products like flooring, shoes, cork boards, insulation and other products.

WOOD

Wood is one of the oldest natural raw materials used by humanity. Trees have been here for us through history in many functions: as fuel, in construction and shipbuilding, furniture making, as a drawing material while uncut living species add to the aesthetics of our landscape and contribute to the reduction of air pollution. Trees get 90% of their nutrition from the atmosphere and only 10% from soil.

Wood is a biodegradable material and a renewable resource. Our wooden products are sourced from a variety of woods such as walnut, pine and birch. Wooden products have a natural and durable appearance associated with high value, which makes it the perfect material for elegant and exclusive products. The tree is also a remarkable symbol in many mythologies and religious traditions, known as the tree of life or tree of knowledge.

Paper is a usually thin and flexible material produced using fibres of cellulose pulp derived from wood, rags or grasses. It is a versatile material with many uses, including writing, printing, cleaning, decorating and even industrial and construction processes. Nowadays the largest category of paper use is packaging, accounting for 41% of total paper consumption.

PAPER / RECYCLED PAPER

Paper recycling is the process by which waste paper is turned into new paper products. Three main sources of waste can be recycled. Mill broke and pre-consumer waste are production wastes that were discarded before it was ready for consumer use. Post-consumer waste is paper that is collected after it has been used by end-users. It includes waste paper from offices and homes, old newspapers and packaging.

Approximately 40% of paper pulp is created from wood, of which only 9-16% of pulp is made from tree cuts, the rest comes from waste wood that was traditionally burnt. Most paper companies also plant trees to help regrow forests. Trees raised specifically for pulp production account for 16% of world pulp production.

JUTE

Jute is a natural textile fiber made from the jute plant. It gives a relatively rough and very durable fabric that is highly resistant to abrasion and stains. These characteristics make jute an ideal bag material. Jute fabric is one of the world's least expensive textiles and the second most-produced plant-based fiber. When cultivated right jute has an overall positive impact on the environment and it is biodegradable.

STRAW

Straw material consists of the dry stalks of cereal plants such as wheat, oats, rye, barley and buckwheat. It has several uses, including fuel, animal bedding and fodder, thatching and basket making. But the most popular items made of straw are hats. Straw just like any organic material is environmentally friendly and biodegradable. As an agricultural by-product it is also an inexpensive material.

GLASS

Glass is a strong and extremely durable material while it is also very decorative. It is made from natural ingredients - mainly sand - without any chemical layers or additives, which makes it the safest packaging option for foods and beverages. It has many other versatile uses, for example, window panes, optics, in communications networks and also thermal insulating material as well. It's 100% and infinitely recyclable, reusable and refillable.

LIMESTONE CEMENT

The main materials of limestone cement is water and ground limestone, both can be found in nature. Due to heat, these materials forms a binder, resulting a very durable material.

Products made of limestone cement possess a high sense of quality and are very long-lasting. Their ecological impact is relatively low in comparison to plastic items, especially when they are combined with other natural materials, such as bamboo.

ENVIRONMENTAL IMPACT OF COTTON

COTTON

ORGANIC COTTON

RECYCLED COTTON

COTTON

Cotton is a natural raw material made of the soft fibres covering and protecting the seeds of the cotton plant. It is native to tropical and subtropical regions around the world. Leading exporters of cotton are India, the United States, China, Brazil, and Pakistan.

Most cotton is harvested mechanically. The fibres are then spun into yarn or thread and used to make a soft, breathable textile. Cotton is used in the production of several textile products, like fashion garments, towels and home textiles. It is also used in fishing nets, coffee filters, tents, cotton paper, and in bookbinding. Cottonseed is utilized to produce cottonseed oil, which is eatable like any other vegetable oil.

ORGANIC COTTON

Organic cotton is the cotton fibre that has been grown from genetically non-modified plants, without the use of synthetic pesticides and fertilizers, through a process that preserves biodiversity. Organic cotton fabrics have ethical and responsible cultivation and harvesting process: optimal working conditions for the farmers and the preservation of the environment of the growing areas.

RECYCLED COTTON

Cotton recycling is a mechanical process: after sorting, the fabrics are run through a machine that shreds the fabric into yarn and further into raw fibre. It is then spun into new yarns for reuse in other products. The largest amount of recycled cotton comes from pre-consumer waste generated in the process of cutting and making textile products.

PLASTIC TO FABRIC

RECYCLED PET (RPET)

PET (Polyethylene Terephthalate) is a thermoplastic that is 100% recyclable into the same PET products (fibre and bottles). PET is most commonly used in the packaging of drinks, food, personal care and pharmaceutical products, labelled with the #1 code on or near the bottom of bottles and containers.

PET material collected for recycling is carefully separated and cleaned in the process. Sorted bottles are ground up to "flakes". These flakes then are thoroughly washed in more stages to remove any residue of dirt or foreign materials. The material is heated to melt the plastic that is extruded into strands and chopped into tiny pellets. Pelletized plastic provides a uniform-sized material that can be reintroduced into the manufacturing process.

RPET can be used for numerous applications. PET that is spun into fibre is also used to make clothing, jackets, polar fleeces, reusable carry bags and even roof insulation. PET plastic can be recycled again and again without any change in its characteristics or quality.

PLA PLASTIC

PLA is a thermoplastic polyester made from renewable resources like corn starch or sugar cane, therefore also known as "bioplastic". It is biodegradable and has similar properties as petroleum-based plastics, like polypropylene (PP) or polyethylene (PE). The most common uses of PLA include plastic films, bottles, and biodegradable medical devices, while PLA fibre can also replace non-renewable polyester textiles.

WHEAT STRAW PLASTIC / BAMBOO FIBRE PLASTIC

Wheat straw is an agricultural by-product, it is the stalk that is left behind after wheat grains are harvested. Reusing this natural waste also reduces the need for disposal, which is often accomplished through burning it, contributing to air pollution.

Bamboo is a rapidly renewable resource. It's fast-growing and prolific – it can be harvested after only two to five years, and new culms emerge from the roots each spring.

Fibre-reinforced plastics are composite materials that are made by combining plastics (like PP or ABS) with natural fibres (like bamboo fibre or wheat straw). This combination provides a more flexible and durable material and products that can serve you for a longer time. Adding natural fibres also means that less thermoplastic is used in the production process. Giving that these products also weigh less than traditional plastic items, their transportation requires less fuel which makes them even more sustainable.

DID YOU KNOW?

Cork oaks are evergreen trees, and they have leaves that react to dry conditions, with pores that close to reduce loss of water by transpiration during dry weather. The oldest and largest cork oak - the "Whistler Tree" - was planted in 1783. It is still the most productive cork oak on record.
